Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 8, 11-15 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Regarding claim 8, claimed invention discloses a signal processing method comprising choosing base functions and a frequency function to generate a carrying function, however it does not provide for practical application by physical transformation (see Interim Guidelines for Examination of Patent Applications for Patent Subject Matter Eligibility, p19).

Claims 11-15 do not provide physical transformations to overcome 101 rejection of claim 8.

Allowable Subject Matter

Claims 1-7 are allowed.

Prior art failed to show a signal processing method comprising the steps of sampling a data signal to obtain a carrying function; wherein a data signal is sampled and the total sampling number is m , and each sample obtains a quantization value

Art Unit: 2611

expressed as $b_{\text{sub}.i}$, $i=1 \dots m$; wherein said carrying function can be obtained according to the following steps: choosing plural base functions and a frequency function $f(t)$; wherein each base function satisfies the following conditions: a. being an even function or an odd function; b. being a continuous function; c. being a periodic function, which period is T ; d. being orthogonal with other base functions; wherein each base function $g(n, t)$ can be expressed as a form of $h^*(nTt/k)$: h representing a function form, k representing the total number of said plural base functions, n representing the n -th base function, t representing the time variable; wherein bandwidth of said frequency function $f(t)$ is $f_{\text{sub}.n}$ and period of said frequency function $f(t)$ is T ; using said plural base functions and said frequency function to generate said carrying function, which can be expressed as:

$$F(n, t) = \frac{T}{k} \sum_{i=1}^k \left[f\left(t + \frac{T}{k}i\right) g\left(n, \frac{T}{k}i\right) \right]$$

and encoding said sampled data signal by said carrying function to obtain a transmission signal, which bandwidth is $f_{\text{sub}.n}$ and can be expressed as:

$$SM(t) = \sum_{i=1}^n b_i F(i, t).$$

Claims 9 and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
